## What is claimed is:

- A cooling system for use with a storage system having a storage device
   that generates heat while in operation, the cooling system comprising:
  - a drive rail that is coupled to the storage device;
- a rail channel that is at least partly bounded by the drive rail; and a fluid source that provides a fluid, wherein at least a portion of the fluid provided by the fluid source is moved through the rail channel to transfer heat to the drive rail that is generated by the storage device.
- The cooling system of claim 1 wherein at least approximately
   15% of the fluid from the fluid source is moved through the rail channel.
- 3. The cooling system of claim 1 wherein at least approximately 35% of the fluid from the fluid source is moved through the rail channel.
- 4. The cooling system of claim 1 wherein at least approximately
  15% of the heat generated by operation of the storage device is transferred to the drive rail and removed through the rail channel.
- 5. The cooling system of claim 1 wherein at least approximately
  35% of the heat generated by operation of the storage device is transferred to the drive rail and removed through the rail channel.
- 6. The cooling system of claim 1 wherein the drive rail is made from material with a thermal conductivity of at least approximately 3W/IN-C°.
- The cooling system of claim 1 wherein the drive rail includes a
   channel side and an attachment side, the storage system being coupled to the attachment side, wherein the rail channel is positioned adjacent to and at least
   partly bounded by the channel side of the drive rail.

- 8. The cooling system of claim 7 wherein the drive rail has a plurality of fins that cantilever away from the channel side of the drive rail.
- 9. The cooling system of claim 8 wherein the fins are substantially perpendicular to the channel side of the drive rail.
- 10. The cooling system of claim 8 wherein the fins extend 2 substantially the entire length of the drive rail.
- 11. The cooling system of claim 7 further comprising a bracket that is2 coupled to the attachment side of the drive rail, the bracket securing the storage device to the drive rail.
- 12. The cooling system of claim 11 wherein the bracket is 2 substantially U-shaped.
- 13. The cooling system of claim 11 wherein the bracket is made from2 material with a thermal conductivity of at least approximately 3W/IN-C°.
- 14. The cooling system of claim 11 wherein the bracket is adapted to
  2 receive the storage device and to couple the storage device to the attachment side of the drive rail, the bracket substantially surrounding three sides of the
  4 storage device.
- 15. The cooling system of claim 11 wherein the storage system includes a plurality of storage devices, and wherein the drive rail is coupled to at least two of the storage devices, the at least two storage devices being positioned so that a top surface of one storage device is directly beneath a bottom surface of another storage device, wherein the distance between the surfaces is less than approximately 0.375 inches.

- 16. The cooling system of claim 11 further comprising a first thermal gasket situated between the bracket and the storage device, the first thermal gasket being made from a material with a thermal conductivity of at least approximately 1W/M-K.
- 17. The cooling system of claim 16 further comprising a second
   2 thermal gasket situated between the bracket and the storage device, the second thermal gasket being made from a material with a thermal conductivity
   4 of at least approximately 1 W/M-K.
- 18. The cooling system of claim 11 further comprising a rail thermal
   2 gasket situated between the bracket and the drive rail, the rail thermal gasket being made from a material with a thermal conductivity of at least
   4 approximately 1W/M-K.
- 19. The cooling system of claim 1 further comprising a housing
  2 adapted to substantially surround the drive rail, wherein the rail channel is at least partly bounded by the housing.
- 20. A storage system including the cooling system of claim 1 and a storage device coupled to the cooling system.
- 21. A cooling system for use with a storage system having a storage device that generates heat while in operation, the cooling system comprising:
  - a drive rail having a channel side and an attachment side;
- a bracket that secures the storage device to the attachment side of the drive rail, the bracket transferring heat away from the storage device to the drive rail; and

8

a fluid source that provides a fluid, wherein at least a portion of the fluid is moved near the channel side of the drive rail to transfer heat to the drive rail that is generated by the storage device.

- The cooling system of claim 21 further comprising a rail channel
   that is at least partly bounded by the drive rail; wherein a portion of the fluid provided by the fluid source is moved through the rail channel.
- 23. The cooling system of claim 22 wherein at least approximately15% of the fluid from the fluid source is moved through the rail channel.
- 24. The cooling system of claim 22 wherein at least approximately
  15% of the heat generated by operation of the storage device is transferred to the drive rail and removed through the rail channel.
- 25. The cooling system of claim 21 wherein the drive rail is made from material with a thermal conductivity of at least approximately 3W/IN-C°.
- 26. The cooling system of claim 21 wherein the storage device couples to the attachment side of the drive rail.
- 27. The cooling system of claim 21 wherein the drive rail has a plurality of fins that cantilever away from the channel side of the drive rail.
- 28. The cooling system of claim 27 wherein the fins are substantially perpendicular to the channel side of the drive rail.
- 29. The cooling system of claim 27 wherein the fins extend 2 substantially the entire length of the drive rail.
- 30. The cooling system of claim 21 wherein the bracket is 2 substantially U-shaped.

- 31. The cooling system of claim 21 wherein the bracket is made from 2 material with a thermal conductivity of at least approximately 3W/IN-C°.
- 32. The cooling system of claim 21 wherein the bracket substantially 2 surrounds three sides of the storage device.
- 33. The cooling system of claim 21 wherein the storage system 2 includes a plurality of storage devices, and wherein the drive rail is coupled to at least two of the storage devices, the at least two storage devices being 4 positioned so that a top surface of one storage device is directly beneath a bottom surface of another storage device, wherein the distance between the 6
- 34. The cooling system of claim 21 further comprising a first thermal gasket situated between the bracket and the storage device, the first thermal 2 gasket being made from a material with a thermal conductivity of at least 4 approximately 1W/M-K.
- 35. The cooling system of claim 21 further comprising a rail thermal gasket situated between the bracket and the drive rail, the rail thermal gasket 2 being made from a material with a thermal conductivity of at least 4 approximately 1W/M-K.
- 36. A storage system including the cooling system of claim 21 and a 2 storage device coupled to the cooling system.
- 37. A method for cooling a storage device that generates heat while 2 in operation, the method comprising:

providing a drive rail;

surfaces is less than approximately 0.375 inches.

4 coupling the storage device to the drive rail; providing a rail channel positioned adjacent to and at least partly bounded by the drive rail; and

8

directing a fluid through the rail channel to transfer heat to the drive rail that is generated by the storage device.

- 38. The method of claim 37 including the step of transferring at least
  approximately 15% of the heat generated by the operation of the storage device to the drive rail.
- 39. The method of claim 37 wherein the step of providing a drive rail
   includes providing a drive rail made from material with a thermal conductivity of at least approximately 3W/IN-C°.
- 40. The method of claim 37 wherein the step of providing a drive rail includes providing a drive rail having a plurality of fins that cantilever substantially perpendicularly away from at least one side of the drive rail.
- 41. The method of claim 37 further comprising the step of coupling a bracket to the drive rail, wherein the bracket receives the storage device on one side of the drive rail.
